

Unmolested Big Pass Might Be Dredged!-Turning Siesta Key Beaches FROM WHITE SAND TO ??!?!?!

SIESTA KEY RISKS LOSING ITS LOVELY BEACHES & #1 STATUS

(Since the beginning of time unharmed Big Pass has nourished our beaches)

OUR PROPERTY VALUES WOULD BE NEGATIVELY IMPACTED

(Our treasured crystal white beaches could disappear)

OUR TAXES WOULD INCREASE TO FIX THE IMPACT OF DREDGING

(The consequences of an incorrect decision will cost us money to repair)

A KEY DECISION IS ABOUT TO BE MADE

(County Commissioners are reviewing the impacts of Big Pass dredging)

The U.S. Army Corps of Engineers plans to replenish the beaches of Lido Key with sand dredged from Big Pass. The Atkins Peer Review commissioned by the County found the Corps' models not capable of predicting the impacts on Siesta Key and that the sand that normally nourishes our beaches may no longer do so. Lido needs sand which can come from their traditional nourishment sources without damaging Big Pass, a natural water system that has never been dredged.

HOW CAN YOU HELP? WHAT CAN YOU DO? BECOME AWARE & COMMUNICATE YOUR CONCERNS
